The Problem — Understanding Health Concerns Should Be Easier

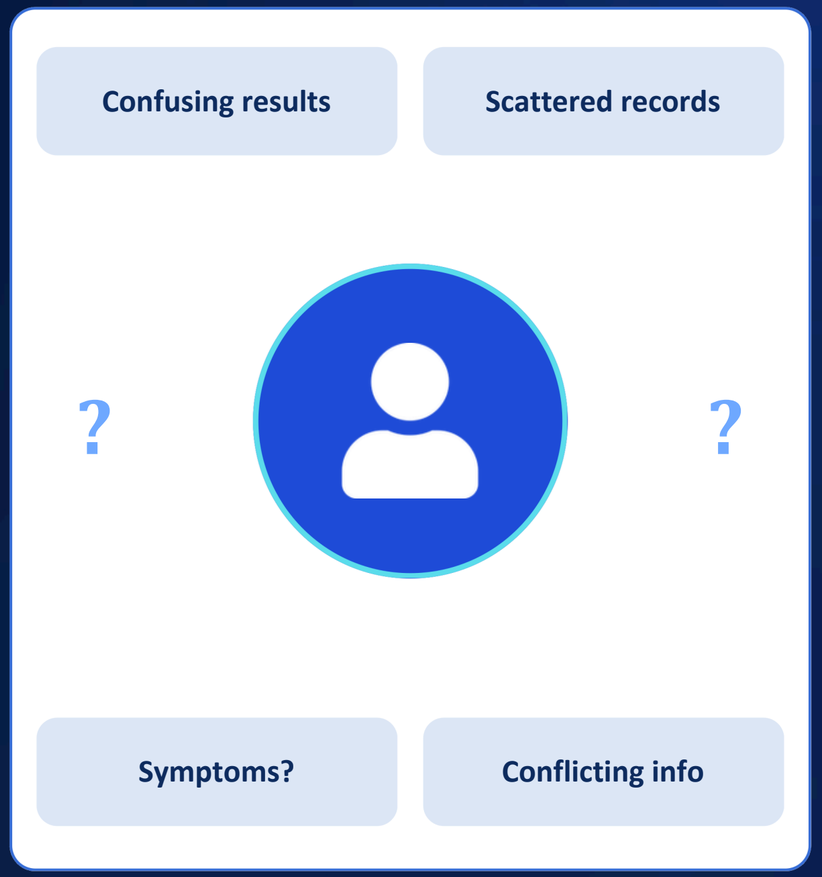

1. **Information Overload**
   Onlinehealthinformationcan be confusing, overwhelming or hard to evaluate, so people struggle to interpret their symptoms.

2. **Unclear Next Steps**
   Usersareoftenunsurewhether they should seek professional medical advice or what to do next.

3. **Fragmented Health History**
   Assessmentinformationandearlier health concerns are scattered, making them hard to organize and revisit.

4. **Difficulty Preparing for Consultation**
   Withoutaclearsummaryoftheirconcerns,patients may find it hard to prepare for a conversation with a doctor.

5. **Incomplete Information for Doctors**
   Healthcareprofessionalsmayreceiveincomplete or poorly organized information from patients.

Core problem: People need a simpler, more organized way to understand their reported health concerns and identify appropriate next steps without relying on confusing information or treating automated results as a medical diagnosis.

Our Solution — Introducing CarePath AI

Guided Health Assessment
Structured entry of relevant health concerns

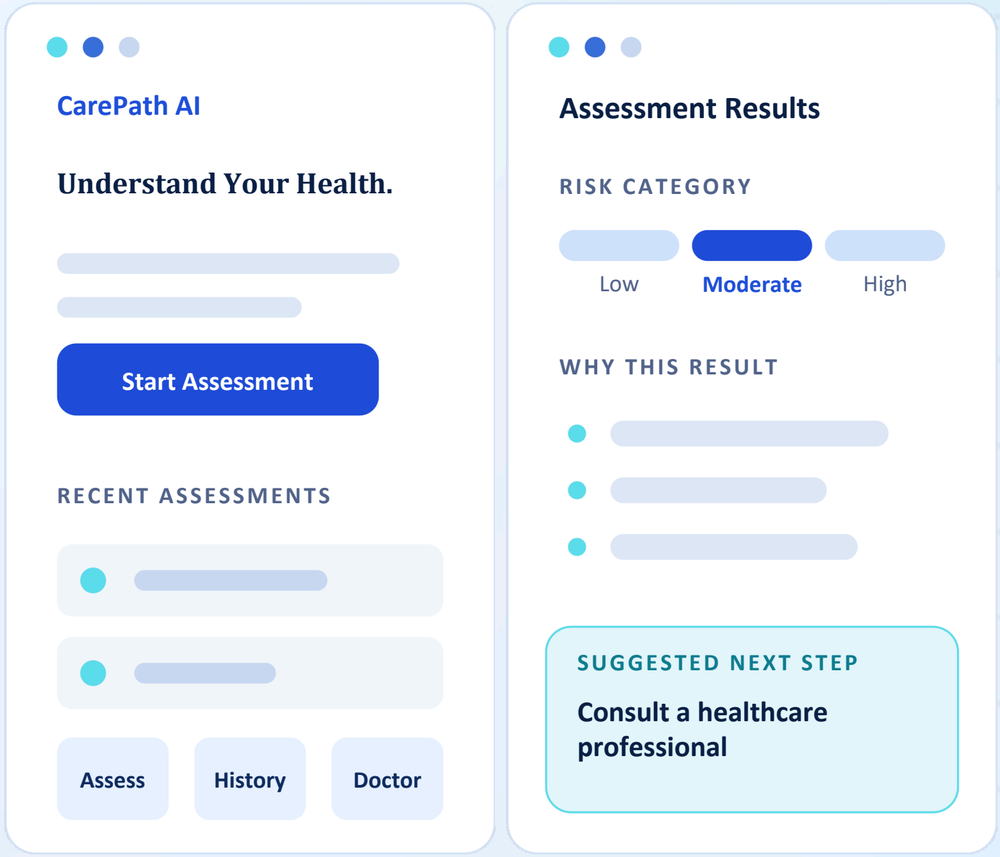

Assessment Results Dashboard
Results and risk categories in an organized format

Understandable Explanations
Reasons behind a result, when the system supports it

Patient History
Previous assessments organized, where available

Doctor Portal
Authorized doctors review available assessment info

Next-Step Guidance
Follow-up options with advice to consult professionals

Illustrative interface mockups

"From confusing health concerns to clearer, more organized next steps."

CarePath AI supports healthcare decision-making and does not replace professional medical diagnosis.

CarePath AI Workflow — Patient and Doctor

Decision support only — CarePath AI does not replace professional diagnosis.

AI integration and data storage are shown only where implemented in the application.

Technology Stack — Powering CarePath AI

Frontend

React
Component-based user interface

Vite
Development server and build tooling

Tailwind CSS
Responsive styling and reusable design utilities

Backend

Python
Backend application logic

FastAPI
API development and request handling

Logic & AI

Assessment Logic
Processes user-provided assessment information

AI API
AI-assisted features, only where implemented

Data

Supabase
Database and related services, if configured

Innovation with Meaningful Healthcare Impact

Innovation

- Combines health assessment, results and assessment history in one experience
- Emphasizes understandable explanations rather than unexplained results
- Connects patient-facing workflows with a doctor-facing review interface
- Uses digital technology to make health information easier to navigate
- Prioritizes responsible decision support, not a replacement for doctors

Impacts & Benefits

For Patients

- Better organization of reported health concerns
- Easier access to assessment information
- Improved preparation for healthcare consultations

For Healthcare Professionals

- More structured assessment information for review
- Easier access to available assessment history
- Potential foundation for more organized interactions

For the Healthcare Ecosystem

- Apatient-centered digitalexperience
- Potential for more accessible health information
- Foundation for future responsible digital healthcare

"Innovation is not just about generating information. It is about helping people understand it and take appropriate next steps."

Research — Existing Solutions and Our Focus

Existing project	What it already does	Area CarePath AI could emphasize
Ada Health	Guided symptom assessment	**Connecting assessment with patient history and doctor review**
Buoy Health	Conversational symptom guidance	**A connected patient-to-doctor workflow**
WebMD	Symptom lookup and health information	**Organized assessment and follow-up**
Symptomate	Questionnaire-based assessment	**A simple, integrated patient experience**
Isabel Healthcare	Clinical decision support	**Patient-friendly results alongside professional review**

CarePath AI brings assessment, explained results, history and doctor review into one connected experience.

Comparison is based on each tool's publicly described purpose and is a design focus, not a claim of superiority or clinical validation.

Conclusion

1. Easy Health Assessment: Helps users understand their health concerns and assessment results.
2. Connected Healthcare: Organizes patient history and supports doctor review.
3. Multilingual Support: Make healthcare information accessible in multiple languages.
4. Advanced AI Integration: Improve health guidance and explore doctor appointment booking.

“Understand Your Health. Know Your Next Step.”
